

bioForce Packets™

Bacterial Waste Liquefier

DESCRIPTION

bioForce Packet™ is a live bacteria product that effectively liquefies organic waste solids and grease to promote proper system functioning and eliminate odor. Packaged in convenient pre-measured dissolvable packets that are easy to use in septic tanks, grease traps, and holding tanks.

The bacteria strains in **bioForce™** are highly specialized to digest grease, fats, oils, protein, starch and carbohydrates. When mixed with water, **bioForce™** goes to work, breaking down these waste products into smaller and smaller particles. As the bacteria feed on this waste, they grow and reproduce, continuing to break down organic waste into harmless carbon dioxide and water. Regular applications are recommended to maintain peak effectiveness.
